

Global Growth - Covid-19 Commentary

As you all may know, we normally do not comment on any one quarter of market action. However, given one of the biggest and also the fastest market corrections in history, we wanted to provide you our thoughts and perspective regarding the Covid-19 crisis.

First and foremost, we hope all of you and your loved ones are healthy. For those who have been impacted we wish you solace in these difficult times.

“In the short run, the market is a voting machine but in the long run, it is a weighing machine.”

What Ben Graham describes is the result of innate behavioral biases that we believe drive reflexive overreactions to short-term market variables that, when viewed rationally, have no impact on long-term value.

First, we want to provide you with a performance update. In short, the strategy significantly outperformed its benchmarks and peers – especially during the drawdown. We normally utilize eVestment data, but as these figures are not available for daily returns for composites, we are providing you with Lipper figures in the table immediately below to highlight our intra-quarter performance. The rest of the peer data that follows is from eVestment unless otherwise noted.

LOOMIS SAYLES GLOBAL GROWTH REPRESENTATIVE ACCOUNT - PERFORMANCE FROM PEAK

Performance Periods ³	Loomis Sayles GG Rep Account Returns (Gross) ¹	Loomis Sayles GG Rep Account Returns (Net) ¹	Lipper Peer Rank (%) ²	MSCI ACWI Return	Excess Return (Gross)	Excess Return (Net)	MSCI ACWI Growth Return*	Excess Return (Gross)	Excess Return (Net)
Peak to trough: 2/20/2020 - 3/23/2020	-27.22%	-27.25%	5	-33.60%	6.38%	6.35%	-30.82%	3.60%	3.57%
Since Peak: 2/20/2020 - 3/31/2020	-19.13%	-19.16%	9	-23.40%	4.27%	4.24	-20.77%	1.64%	1.61%

Data source: Loomis Sayles, Lipper.

Lipper GG primary share peer rankings (gross) are shown for peak to trough and since peak periods due to availability of data; Lipper provides daily rankings where eVestment does not. Although this Lipper analysis is for mutual funds, we believe that it is relevant because the Loomis Sayles Global Growth Fund Y-Class is managed by the same investment team and based on the same philosophy as the Composite. Strategy returns are based on a representative account.

*The benchmark for the Global Growth Composite is the MSCI ACWI Index. Performance for the MSCI ACWI Growth Index is shown as supplemental information

Ranking out of 216 observations; (Lipper's Global Equity Universe).

We are an active manager with a long-term, private equity approach to investing. Our investment process relies 100% on bottom-up fundamental research. Through our proprietary research framework, we look to invest in those few high-quality businesses with sustainable competitive advantages and profitable growth only when they trade at a significant discount to intrinsic value. Because we approach investing as if we are buying into a private business, a long investment horizon is central to our philosophy. Since inception on July 1, 2006⁴ through March 31, 2020, the long-term annualized turnover for our Large Cap Growth and All Cap Growth strategies is 12.7% and 15.2%, respectively. Annualized turnover for our Global Growth strategy is 7.5% since its inception on January 1, 2016.

Over the last 100 years, the world endured many alarming, unexpected, and damaging events including world wars and other regional conflicts, the Great Depression, the Tech Bubble, the attacks of 9/11, the financial crises of 2008-2009, an oil shock and an oil bubble, and the SARS virus. These events almost always impact short-term economy and market performance to varying degrees. Nevertheless, over the long term, markets have trended upward. The Dow Jones Industrial Average rose from 107.23 at the end of 1919 to 28,538.44 by the end of 2019.

We do not know exactly what will happen as a result of Covid-19; nor does anyone else. Nor can most of these types of events be predicted. We believe efforts to precisely predict the timing, duration, and magnitude of these events are futile. The good news is we believe one need not predict these events to be prepared for the events. The best preparation requires, we believe, a consistent and disciplined ability to do the right thing every day; that is to allocate capital rationally based on informed views of risk-reward. Our approach as an investment manager is to allocate capital to our most compelling reward-to-risk opportunities, regardless of the type of market or short-term events. Doing so requires the knowledge to establish a range of valuation outcomes or scenarios. When buying a business, we require at least a 2:1 anticipated upside-to-downside, reward-to-risk opportunity. We seek to create a margin of safety⁵ by investing at a purchase price that is at a meaningful discount to our estimate of a company's intrinsic value. Investing with a margin of safety requires not only a disciplined understanding of a company's intrinsic value but a clear recognition of what the market price implies about consensus expectations for that company's value. Adhering to this discipline is what helps us manage downside risk, not attempting to correctly forecast unknowable and unforecastable events. Implementing our approach demands the temperament and concomitant discipline to be a contrarian who can buy into fear and sell into greed.

For us, global company research is not a separate endeavor from US company research. The same alpha engine drives both US and non-US idea generation and helps enable us to recognize mispricing of structurally superior businesses worldwide. This, we believe is a key competitive advantage of our Growth

Equity Strategies team. The Growth Equity Strategies team has a strong domestic long-term track record. Consider our performance in 2008, during the financial crisis (see chart below); our Large Cap Growth strategy outperformed the Russell 1000 Growth index by 10.40% (gross), 9.95% (net) and ranked in the 4th percentile among our peer group. Our strategy also outperformed in 2009, giving us an annualized positive 2-year return of 0.81% (gross), 0.22% (net) and ranked in the 1st percentile among our LCG peer group (ranked by eVestment Alliance out of 457 observations). Over our track record (July 1, 2006 through March 31, 2020), our strategy's maximum drawdown of 38.73% ranks in the 3rd percentile among our LCG peers with our Calmar ratio⁶ of 0.32, ranking in the 1st percentile.

As of 3/31/2020	Large Cap Growth	Peer Rank	Count
Excess return 2008 (gross/net)	10.40% / 9.95%	4 th	487
Annualized return 2008-2009 (gross/net)	0.81% / 0.22%	1 st	457
Maximum drawdown since inception	-38.73%	3 rd	191
Calmar ratio since inception	0.32	1 st	191

Data source: eVestment Alliance.

Our active risk management is an integral part of our active investment process. Because we define risk as a permanent loss of capital, we take an absolute-return approach to investing and seek to actively manage our downside risk. Also, as important, most investors only focus on the risk they can see and it is usually the risk that is unforeseen and unexpected that has the most impact, especially at inflection points and in down markets. This is important given the number of negative return periods the Russell 1000 Growth Index experiences. Over the last 36 years, 38% of the Index's monthly returns were negative, 28% of quarterly returns were negative, and 19% of yearly returns were negative. Over our track record through March 31, 2020, the Index experienced 12 negative quarters with gross returns ranging from -0.77% to -22.79%. Our Large Cap Growth strategy outperformed the Index in 9 out of the 12 quarters, with a median excess return of 2.67% (gross). Over our track record through March 31, 2020, our strategy also outperformed our LCG peer group in 10 out of the 12 quarters, with a median excess return of 3.35% (gross). Who could have consistently forecasted all these down periods and up markets?

Ultimately, our job as an investment manager is to allocate capital to our most compelling reward-to-risk opportunities. Over our track record through March 31, 2020, gross annualized returns for our Large Cap Growth strategy rank in the 3rd percentile, better than 97% of our LCG peers. What's more, ours is one of the few large cap growth strategies to rank in the top quartile for both down market and up market capture, with statistics of 92.54 and 103.15, respectively. For alpha generation, we believe the pursuit of greater upside potential and managing absolute levels of risk are inextricable goals.

In our view, a long investment horizon affords us an opportunity to capture value from secular growth opportunities as well as capitalize on the stock market's shortsightedness through a process called time arbitrage. Therefore we attempt to identify intrinsic value and exploit the long-term differential between this value and the market's current perception. We measure and monitor our long-term investment thesis for each company through bottom-up analysis of a company's fundamentals, not by the fluctuation in daily stock prices. Our approach always seeks to look beyond the current environment as we have a truly long-term investment time horizon. In any binary or non-binary event, the key question we ask ourselves is if the outcome would materially change the underlying long-term intrinsic value of the businesses that we invest in. Or, in other words, would the event/scenario structurally alter the competitive positioning, competitive advantage, financial model, management, long-term growth rate or driver for growth such that these changes would alter the underlying intrinsic value of the company. What's happening today or on a daily basis does not dictate what we will do for the long-term. The only relevance of what is happening in any environment is our pursuit of taking advantage of what is presented to us in terms of attractive investment opportunities.

In this market downturn, our Global Growth strategy outperformed the MSCI ACWI and the MSCI ACWI Growth benchmarks and ranked in the 9th percentile among our Lipper global peers during the drawdown period beginning February 20, 2020 through March 31, 2020. Our Large Cap Growth and All Cap Growth strategies also outperformed their benchmarks and the S&P 500 during the drawdown period, and both ranked in the 1st percentile among their Lipper peers². It is our opinion that the Covid-19 scenario does not, in and of itself, meaningfully change any of the key criteria listed above. As always, we remain vigilant to developments that do meaningfully alter the long-term investment thesis for any company in our portfolio or investment library.

This Commentary was originally published in December 2020. However, we believe that the content is valuable to understand how the team performs in all market environments. We have added current performance and data numbers to bring it up to date

Past performance is no guarantee of future results.

Endnotes

1 Gross returns are net of trading costs. Net returns are gross returns less the effective management fees. Returns for multi-year periods are annualized.

2 Lipper is the ranking agency. Large Cap Growth ranking out of 153 observations (Lipper's US Large Cap Growth Universe); All Cap Growth ranking out of 146 observations (Lipper's US Multi-Cap Growth Universe); Global Growth ranking out of 216 observations (Lipper's Global Equity Universe). Lipper peer group information is based on mutual funds due to availability of data. Lipper rankings are based on gross returns. Lipper, a Thomson Reuters Company, is not responsible for the accuracy, reliability or completeness of the information obtained from Lipper. In addition, Lipper will not be liable for any loss or damage resulting from information obtained from Lipper or any of its affiliates. All Cap Growth since inception (7/1/2006 – 3/31/2020) performance ranking is 6th percentile, ranking out of 52 observations; eVestment Alliance is the ranking agency (eVestment Alliance's All Cap Growth Universe). Large Cap Growth since inception (7/1/2006 – 3/31/2020) performance ranking is 3rd percentile, ranking out of 193 observations; eVestment Alliance is the ranking agency (eVestment Alliance's Large Cap Growth Universe).

3 Since Peak returns are shown for a representative account. Due to systems limitations it is difficult to analyze attribution on a composite basis. This representative account was selected because it closely reflects the Loomis Sayles Global Growth investment strategy. Due to guideline restrictions and other factors, there is some dispersion between the returns of this account and other accounts managed in the Global Growth investment style.

4 The portfolio manager for the Growth Equity Strategies joined Loomis Sayles on May 19, 2010, and performance prior to that date was achieved at his prior firm.

5 Holding all else equal, the larger the discount between market price of a particular security and our estimate of its intrinsic value, the greater we view our margin of safety. Margin of safety is not an indication of the fund's safety as all investments carry risk, including risk of loss.

6 Calmar Ratio: This ratio is calculated by dividing the annualized manager return by the max drawdown over a selected time period. This is a commonly used hedge fund measure since such funds often employ hedging strategies to protect returns in down markets; hence, the max drawdown is expected to be lower. Generally, a higher Calmar Ratio is better as it indicates the manager has higher returns and/or lower max drawdown.

Source: eASE Analytics System; eVestment Alliance is the ranking agency. (eVestment Alliance's Global Growth Universe.) Annualized performance is calculated as the geometric mean of the product's returns with respect to one year. Returns-based data are gross of management fees and net of trading costs. The highest (or most favorable) percentile rank is 1, and the lowest (or least favorable) percentile rank is 100. Rankings are subject to change. Although we believe it is reliable, we cannot guarantee the accuracy of data from a third party source. This information cannot be copied or redistributed in any form.

Benjamin Graham was a British-born American investor, economist, and professor. He is widely known as the "father of value investing", and wrote two of the founding texts in neoclassical investing: Security Analysis with David Dodd, and The Intelligent Investor.

Important Disclosures

This analysis is based on historical data and does not predict future results. Therefore, the use of this type of information to make investment decisions has inherent limitations. There is no guarantee that future experience will be similar. The analysis reflected in this paper is limited to certain periods. We make no representation that the experience of any other periods is comparable

This report is not a recommendation to purchase or sell any security. Examples above are provided to illustrate the investment process for the strategy used by Loomis Sayles and should not be considered recommendations for action by investors. They may not be representative of the strategy's current or future investments and they have not been selected based on performance. Loomis Sayles makes no representation that they have had a positive or negative return during the holding period.

The portfolio manager for the Growth Equity Strategies joined Loomis Sayles on May 19, 2010, and performance prior to that date was achieved at his prior firm.

Gross returns are net of trading costs. Net returns are gross returns less the effective management fees. For periods longer than one year, returns are annualized.

Market conditions are extremely fluid and change frequently.
