

LOOMIS | SAYLES

Loomis Sayles Strategic Alpha: A Low Volatility Multisector Approach

Loomis Sayles Full Discretion Team

Second Quarter 2025

We believe a flexible, benchmark-agnostic fixed income strategy targeting 4-6% volatility can offer investors the ability to seek strong risk-adjusted returns, diversification benefits and a steady income stream.

The Strategic Alpha strategy is an actively managed, low duration offering that utilizes a dynamic approach to risk allocation across a broad universe of fixed income credit and interest rate markets.

Our Philosophy

- We believe the market is inefficient at pricing risk.
- Risk factors, including interest rates, credit, currencies, equity and liquidity, exhibit consistent patterns across cycles.
- We believe fundamental research is an effective approach to identifying and harvesting premiums.
- Multisector investing provides diversification benefits and helps to drive long-term returns.
- Risk management is integral, not an add-on.

Our Process

- Our approach is opportunistic, benchmark-agnostic and focused on total return and risk.
- We believe that fundamental and quantitative research based on a credit cycle framework offers our best approach to identifying attractive investment opportunities.

Our Edge

- We believe that a long-term, cycle-based framework and proprietary risk premium methodology is the basis for a repeatable investment process.
- Intrinsic value and our six pillars guide security selection, which is a key driver of performance.
- We lean into risk by seeking positive convexity, maintaining yield advantage and striving for low turnover.
- Integrated quantitative analysis and customized tools that are designed to fit our process.

About the Team

The Full Discretion team brings decades of expertise and collaboration to create tailored solutions for their clients.

About the Strategy

Style	Global Unconstrained
Strategy Assets	\$5.5B
Composite Inception	May 2011
Primary Benchmark	ICE BofA 3-Month Treasury Bill Index
Secondary Benchmark	Bloomberg US Aggregate Index
Expected Volatility	4% to 6%
Typical Duration Range	-2 to 5 years
Credit Quality	+/- 50% non-investment grade net exposure

Source: Loomis Sayles, as of 6/30/2025

Average years of expertise reflected at portfolio management level. Although the Investment Manager actively seeks to manage risk for a targeted level, there is no guarantee that the portfolio will be able to maintain its targeted risk level. All figures are approximate and apply under normal market conditions. They are based on guidelines that are subject to change.

Diversification does not ensure a profit or guarantee against a loss. Any investment that has the possibility for profits also has the possibility of losses, including the loss of principal.

There is no guarantee that the investment objective will be realized or that the strategy will generate positive or excess return. Please refer to the end of this material for additional important disclosures. For more information, please request a full presentation book for the Loomis Sayles Strategic Alpha Composite.

Strategy Differentiators

Seek to Maximize Total Return Through a Risk-Controlled Approach

- Seek to maximize total return within a 4-6% target volatility range by using a fully integrated risk management process, diversification guidelines and a balanced allocation to spread and interest rate risk.

Focus on Income Generation

- Broad opportunity set across countries, sectors, industries, credit qualities and currencies provides distinct exposures with potentially favorable yields.
- Seek to incorporate a potential yield advantage compared to traditional fixed income benchmarks.

Flexibility Across Interest Rate Environments & Credit Cycles

- We believe having a duration range of -2 to +5 years results in less sensitivity to rising interest rates but provides flexibility to capture opportunities through duration and yield curve positioning.
- Our credit cycle framework and bottom-up security selection is designed to identify and analyze different phases of the credit cycle, which allows us to harvest risk premiums when expected returns outweigh the drawdown potential.

Investment Process Can Lead to Potential Diversification Benefits

- By diversifying the portfolio's risk profile and utilizing a dynamic approach to credit sectors and duration, the strategy tends to exhibit lower correlation to traditional, domestic core and core plus fixed income strategies, while also maintaining diversification relative to risk assets.

Transparency & Liquidity

- Portfolios are implemented primarily through physical bonds, which seek to offer investors with an adequate liquidity source.
- Liquid derivatives are used for hedging and investment purposes, utilized to dynamically adjust risk exposures.

Key Attributes

Risk Management

Risk profile appropriate for a diverse investor base, including sovereign wealth funds, corporate treasuries, pensions plans, endowments and foundations.

Dynamic Allocations

We utilize a dynamic approach to opportunistically adjust interest rate, credit and currency risks while seeking to harvest risk premiums throughout a full market cycle.

Complementary Exposures

We believe diverse credit exposures complement traditional, domestic fixed income strategies and tactical rotations augment dedicated high yield, bank loan, securitized and emerging markets allocations.

Liquidity

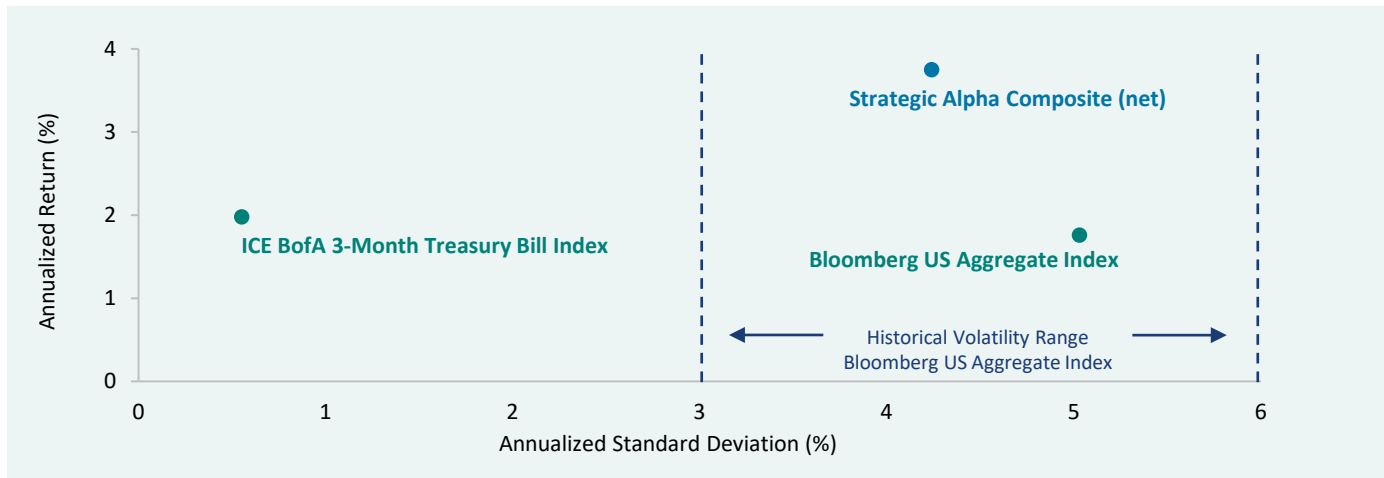

Unlike private debt strategies, which typically require a capital lock-up, the strategy is implemented through public securities that seek to provide investors with a liquidity source.

Although the strategy actively manages risk for a targeted level, there is no guarantee that the strategy will always maintain its targeted risk level.
Commodity, interest and derivative trading involves substantial risk of loss.
Diversification does not ensure a profit or guarantee against a loss.
Any investment that has the possibility for profits also has the possibility of losses, including the loss of principal.
There is no guarantee that the investment objective will be realized or that the strategy will generate positive or excess return.
Please refer to the end of this material for additional important disclosures. For more information, please request a full presentation book for the Loomis Sayles Strategic Alpha Composite.

Seek to Maximize Total Return Through a Risk-Controlled Approach

We seek to maximize total return using a broad investable universe and seek to deliver a risk profile consistent with traditional fixed income indices.

10 YEARS HISTORICAL RISK/RETURN

Focus on Income Generation

Historically, Strategic Alpha composite has delivered an average yield-to-worst advantage of +157bps over the Bloomberg US Aggregate Index.

YIELD TO WORST (%)

Source: Loomis Sayles, Intercontinental Exchange Inc. (ICE), Bloomberg, as of 6/30/2025

The annualized standard deviation measures the variability of the net composite returns and the benchmark over a 10-year period.

Net returns are gross returns less effective management fees. Indices are unmanaged and do not incur fees. It is not possible to invest directly in an index.

Any investment that has the possibility for profits also has the possibility of losses, including the loss of principal.

Past performance is no guarantee of future results.

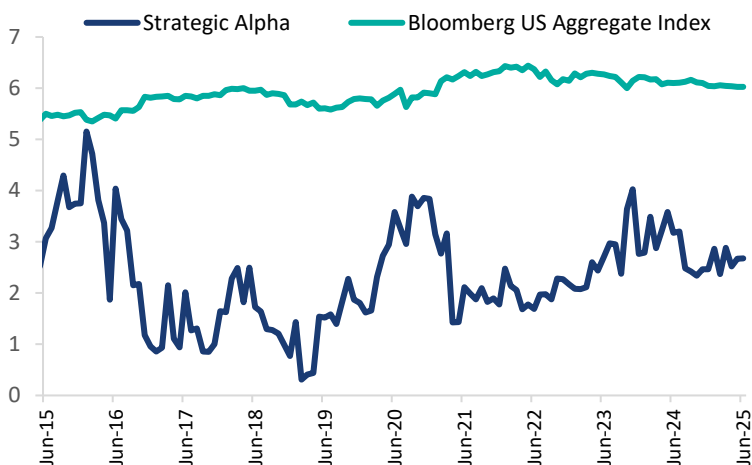

Please refer to the end of this material for additional important disclosures. For more information, please request a full presentation book for the Loomis Sayles Strategic Alpha Composite.

Flexibility to Capture Opportunities Through Credit and Duration Positioning

Our dynamic approach provides the flexibility to tilt into credit and interest rate risks when our outlook is favorable and reduce risk when forward returns appear unattractive, in our view.

We will typically take more credit risk and less duration risk compared to traditional, domestic core and core plus strategies. Our balanced exposure to interest rate and spread risks has historically resulted in less performance sensitivity to interest rates.

DURATION (years)

CREDIT BETA* (%)

Investment Grade Corporates

Seeks to actively allocate across industry and quality exposures, and utilized as a ballast of stability and income

High Yield Corporates, Convertibles and Equities

Use of high yield corporates, convertibles, preferreds, equity-linked notes and equities to augment yield and total return potential

Securitized

Structural bias to target distinct exposures with favorable yields across asset-backed securities, CLOs, commercial mortgage-backed and non-agency residential mortgages

Global Sovereign & FX

Hard and local currency developed/emerging markets sovereign debt offer the potential for diversification and yield enhancement

Duration Management

US Treasuries and interest rate derivatives can be used to dynamically capture opportunities through duration and yield curve positioning

**Calculated as excess risk compared to BBB-rated corporate credit as we view this to be most closely representative of our median risk level.*

Source: Loomis Sayles and Bloomberg, as of 6/30/2025

Indices are unmanaged and do not incur fees. It is not possible to invest directly in an index.

Commodity, interest and derivative trading involves substantial risk of loss.

Diversification does not ensure a profit or guarantee against a loss.

Any investment that has the possibility for profits also has the possibility of losses, including the loss of principal.

There is no guarantee that the investment objective will be realized or that the strategy will generate positive or excess return.

Past performance is no guarantee of future results.

Potential Diversification Benefits

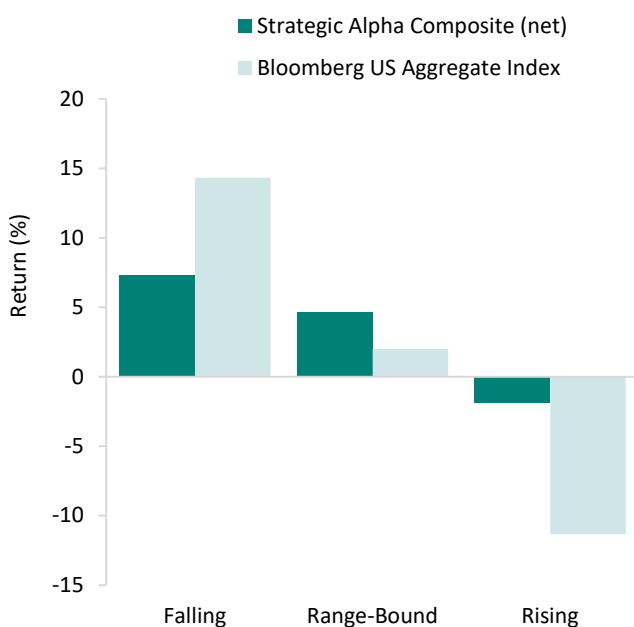

We believe the strategy tends to outperform in range-bound and rising interest rate environments, which have historically captured the majority of the interest rate cycle and tends to underperform in falling interest rate environments.

We expect interest rates to stay range-bound, which we believe is beneficial for the strategy given its yield

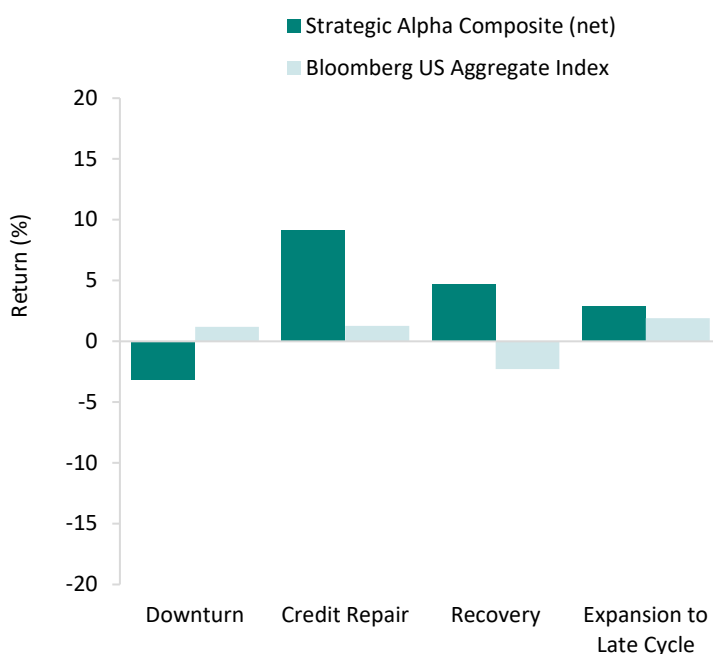

advantage over cash and flexibility to dynamically manage interest rate risk.

The strategy has outperformed the Bloomberg US Aggregate Index in credit repair, recovery and expansion to late cycle and underperformed in downturn due to its broader opportunity set, including non-investment grade and exposures lower in the capital structure.

INTEREST RATE REGIME PERIODS

CREDIT CYCLE REGIME PERIODS

	FALLING	RANGE-BOUND	RISING
Percentage of Time Periods	28%	48%	24%
Excess Return	-7.06	2.66	9.45

	DOWNTURN	CREDIT REPAIR	RECOVERY	EXPANSION TO LATE CYCLE
Percentage of Time Periods	2%	5%	4%	89%
Excess Return	-4.35	7.86	6.99	0.94

Source: Loomis Sayles and Bloomberg, as of 6/30/2025. Based on monthly returns from 6/30/2015 to 6/30/2025.

Rising periods are defined as periods when the price return of the US 10-Year Zero Coupon Treasury declines by more than -2.50% for a rolling period of three months or more based on monthly returns. Falling periods are defined as periods when the price return increases by more than +2.50% for the same period. Range-bound periods are defined as all other periods, which equates to when the US 10-Year Zero Coupon Treasury yield remains within a 50bps range over a 3-month period.

Net returns are gross returns less effective management fees. Indices are unmanaged and do not incur fees. It is not possible to invest directly in an index.

Diversification does not ensure a profit or guarantee against a loss.

Past performance is no guarantee of future results.

Please refer to the end of this material for additional important disclosures. For more information, please request a full presentation book for the Loomis Sayles Strategic Alpha Composite.

Drawdown Management

The strategy utilizes a wide set of investment risk management tools to help manage downside volatility to its 4-6% target but does not expect to eliminate drawdowns entirely.

The strategy's ability to dynamically adjust risk exposures has historically resulted in attractive recovery periods where investors have been compensated for realized drawdowns.

As an example, the Strategic Alpha composite (net of fees) outperformed the Bloomberg US Aggregate Index in the 2022 down market (-7.82% vs. -13.01%) as well as the up markets in 2023 (8.42% vs. 5.53%) and 2024 (8.08% vs. 1.25%).

DRAWDOWN (%)

CUMULATIVE RETURN (%)

Source: Loomis Sayles and Bloomberg, as of 6/30/2025

Although the strategy actively manages risk for a targeted level, there is no guarantee that the strategy will always maintain its targeted risk level.

Drawdown periods are calculated for drawdowns greater than one percent.

The Bloomberg US Aggregate Index and Bloomberg US High Yield Index are shown for reference only.

Net returns are gross returns less effective management fees. Indices are unmanaged and do not incur fees. It is not possible to invest directly in an index.

Commodity interest and derivative trading involves substantial risk of loss.

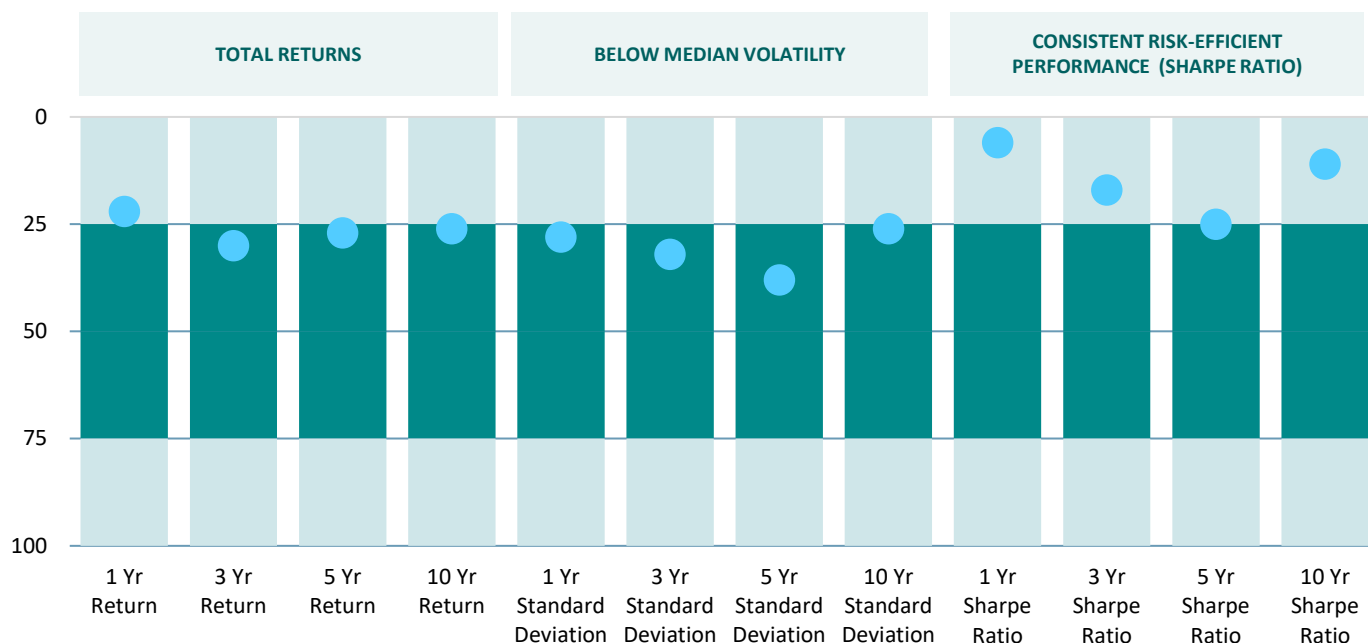

Past performance is no guarantee of future results.
